

A pioneer of copper alloy technology

Yamato Gokin is specializing in manufacturing plates, bars, and discs of special copper alloys including chrome copper, beryllium copper, and special aluminum bronze alloy. We have accumulated orders of materials for aircraft landing gear and actuator bushing/bearing from domestic and oversea MROs (including AMECO and SAFRAN), tier-1 manufactures (including SHIMADZU and NABTESCO) and landing gear OEMs (including SAFRAN and LIEBHERR). We produce more than 100 types of various copper alloys to satisfy customers' needs, even in small amount of materials with short delivery time.

ランディングギア、アクチュエータ用のブッシングの銅合金素材を製造しています。
Raw material for Landing gear bushings Actuator bushings.

AMS4640, AMS4590,
C63000, C64200, C62300,
UZ19A, UA10N, UA11N

We can perform all steps of manufacturing at our facilities, from the melting of raw materials to finished product distribution. Some of our strengths are that we can deliver products with a short lead time ; We can manufacture a wide range of materials and size ; and we can accommodate small order volumes.
